

MyLenio

Teams

MyLenio lets you organize your employees in Teams. From each team, you'll be able to assign training, documents, and tasks for them to complete. Specify all SaaS resources that each team needs to perform their work and provide automatic permissions to all these teams.

Challenges

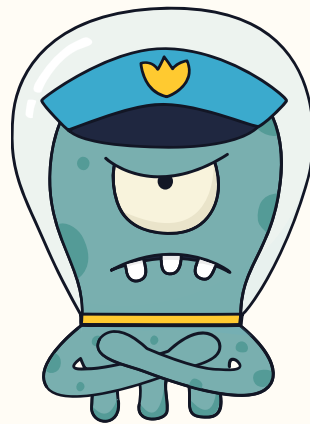

The users have to ask for access.

They don't always know the access they need.

Managing and validating the access is time consuming.

Access traceability is complicated.

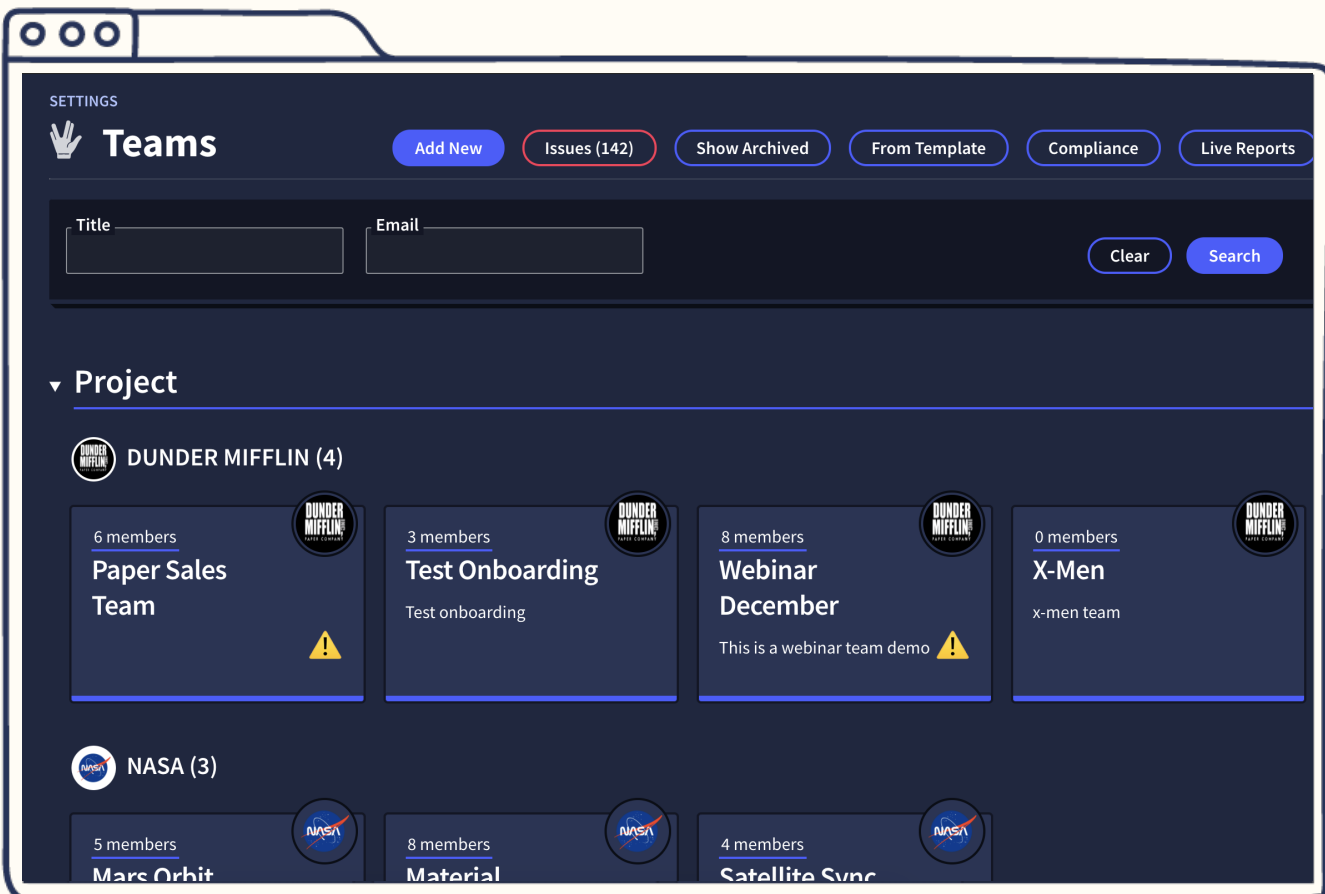

Team Features

Model your teams, and let MyLenio take care of the heavy lifting for you.

Organize the Company by Teams

A team is a group of users organized by roles who need access to resources in order to carry out their work.

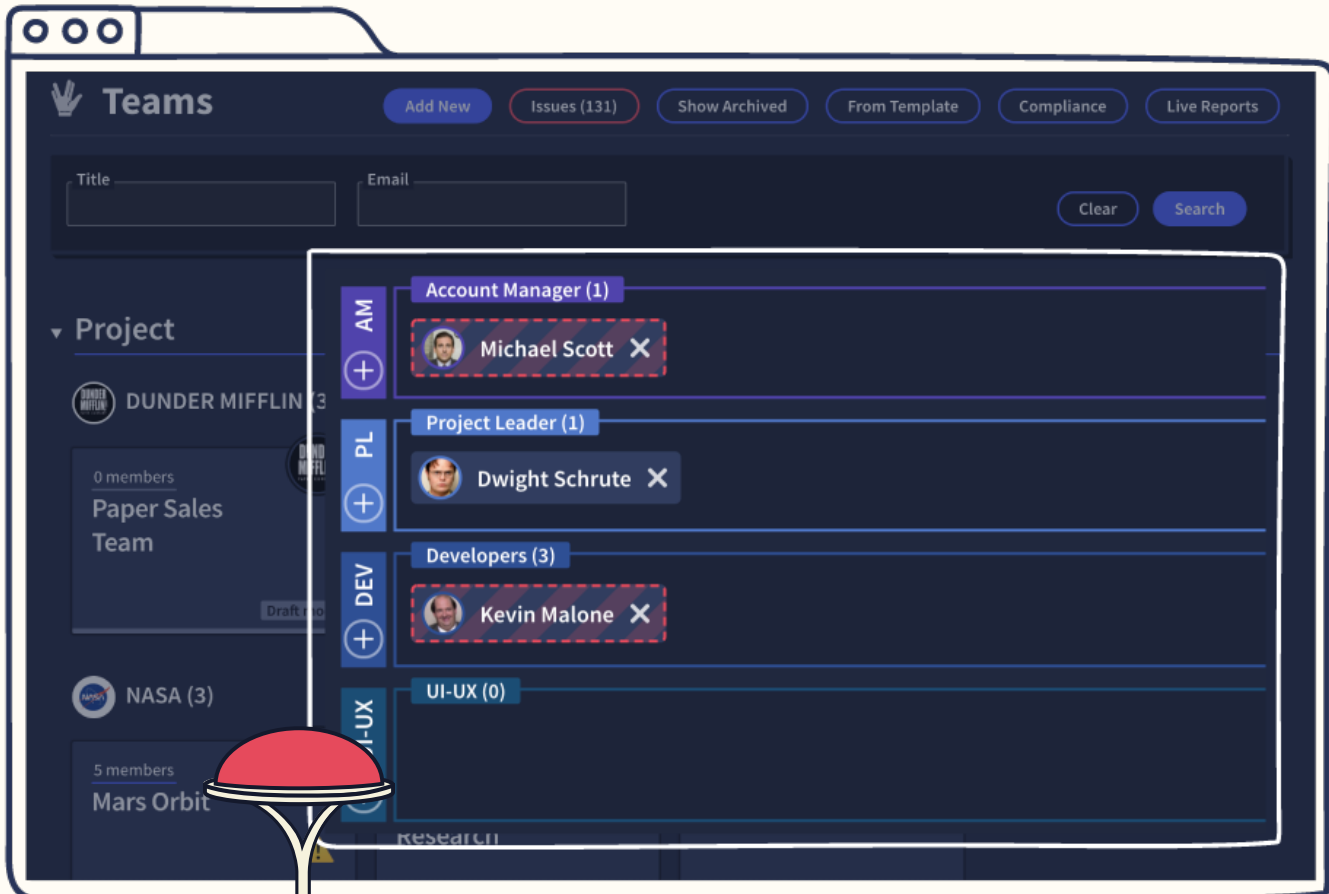

Automate Permissions

When a new user joins a team with a certain role, they are automatically assigned the permissions of that role.

Manage your Users Roles

Each user can have different roles in different teams. It is not at the unit level but at the team level.
